

Themes

Themes

Purpose and when to use this record

Control a storefront's visual theme, brand assets, colors, typography, and active presentation.

At a glance

- **Identify it by: Name.**
- **Check its business context: Store.**
- **Why care:** Store, publication, consent, payment, and fulfillment states affect what customers see and what staff must act on; check the correct store before saving.
- **Why care:** Availability and publication flags affect future use without erasing history. Prefer disabling an obsolete setup record when existing transactions still refer to it.

Before you begin

You need the Brisk permission for the action you are taking on themes. If a Create, Edit, or Delete control is absent, do not work around it with another user's account; ask an administrator to review your role.

Have valid **Store** records ready first. Those selections determine where this Theme belongs and which later screens can find it.

Create a Theme

Create a Theme only when the existing choices do not represent the policy or classification you need. Near-duplicate setup values split reporting and make later selection harder.

1. Select the business context first: **Store**.
2. Enter the required identifying and operational values: **Store**, and **Name**.

3. Review **Is Active**, **Preset**, **Theme Pack**, **Hero Layout**, **Product Card Style**, and **Script Type** deliberately; these choices control availability or workflow rather than merely describing the record.
4. Save the Theme, then confirm **Name** on its detail page before continuing.

After saving: Open the screen that uses this choice and confirm the Theme appears with the intended label and availability. Keep the old value for historical records when changing it would split or relabel prior reporting.

Delete a Theme

Delete this Theme only if it is an unused duplicate or setup mistake. Once other records refer to it, preserve that history and make the value inactive when the screen provides that option.

If the record is merely obsolete, use **Is Active** to remove it from future use while preserving existing references.

On the confirmation page, verify **Name**. After confirmation, return to the Themes list and make sure only the intended Theme was removed.

Review Theme details

Use the detail page as the shared record of what this Theme currently means. Verify **Is Active**, **Preset**, **Theme Pack**, **Hero Layout**, **Product Card Style**, and **Script Type** before relying on it for a decision.

Follow **Store** to determine whether the issue is on this Theme or on one of those linked records.

Next check: Open the screen that uses this choice and confirm the Theme appears with the intended label and availability. Keep the old value for historical records when changing it would split or relabel prior reporting.

Edit an existing Theme

Edit this Theme when the underlying policy or classification changed. First determine whether historical transactions should retain the old value; if so, deactivate the old choice and create a new one.

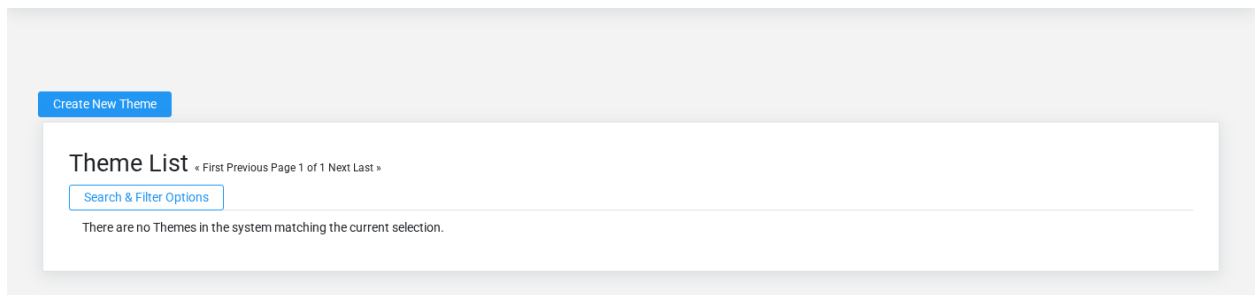

1. Open the detail page. Compare **Store** with the supporting document or approved request.
2. Recheck **Is Active**, **Preset**, **Theme Pack**, **Hero Layout**, **Product Card Style**, and **Script Type**. These values are most likely to change storefront visibility, customer

communication, payment, or fulfillment.

3. Save the change, return to the list, and confirm that the Theme now appears under the expected **Is Active**, **Preset**, **Theme Pack**, **Hero Layout**, **Product Card Style**, and **Script Type**.

After the change: Open the screen that uses this choice and confirm the Theme appears with the intended label and availability. Keep the old value for historical records when changing it would split or relabel prior reporting.

Find and review themes

The Themes list screen in the Brisk documentation demo.

Use the Themes list to find the correct record before opening or changing it. Compare **Name**. Records with similar names or numbers can still belong to different **Store**.

- Keyword search checks **Name**.
- Narrow the list with **Store** filters.
- The initial order emphasizes **Name**. Select a column heading when you need a different comparison.

Open the Theme whose **Name** match the task. If it is missing, clear the list filters and recheck **Store**, **Is Active**, **Preset**, **Theme Pack**, **Hero Layout**, and **Product Card Style**, plus the remaining screen fields rather than creating a replacement immediately.

Fields and business rules

Brisk stores 39 user-relevant fields for this Theme, including 1 linked-record selection and 5 controlled-choice fields. Create and edit screens may hide calculated or workflow-managed values from this full reference.

Field	Required	What it controls
Store	Yes	The store associated with this theme.
Name	Yes	Human-readable name for this theme.

Field	Required	What it controls
Is Active	No	Whether this theme is active.
Preset	No	The preset recorded for this theme. Available values: Atelier, Monochrome, Coastal, Forest, Paper.
Theme Pack	No	Select a full-layout Brisk storefront theme pack. Available values: Storefront Classic, Modern, Minimal.
Section Config	No	Section-level content configuration used by Brisk theme packs.
Primary Color	No	The primary color recorded for this theme.
Accent Color	No	The accent color recorded for this theme.
Background Color	No	The background color recorded for this theme.
Heading Font	No	The heading font recorded for this theme.
Body Font	No	The body font recorded for this theme.
Hero Title	No	The hero title recorded for this theme.
Hero Subtitle	No	The hero subtitle recorded for this theme.
Custom Css	No	The custom CSS recorded for this theme.
Announcement Text	No	The announcement text recorded for this theme.
Hero Layout	No	The hero layout recorded for this theme. Available values: Split, Centered, Minimal.
Product Card Style	No	The product card style recorded for this theme. Available values: Soft, Outline, Minimal.
Favicon Image	No	Optional site favicon image for this storefront theme.
Site Background Image	No	Optional full-width storefront background graphic shown across pages while users scroll.
Shared Head Html	No	The shared head HTML recorded for this theme.

Field	Required	What it controls
Shared Header Html	No	The shared header HTML recorded for this theme.
Shared Footer Html	No	The shared footer HTML recorded for this theme.
Script Type	No	Choose ES module scripts for modern import/export support or classic scripts for legacy snippets. Available values: ES Module, Classic Script.
Javascript Assets	No	Optional script URLs, one per line. Prefix with "module:" to force ES module loading.
Shared Javascript	No	The shared javascript recorded for this theme.
Home Template Html	No	The home template HTML recorded for this theme.
Home Template Javascript	No	The home template javascript recorded for this theme.
Product Template Html	No	The product template HTML recorded for this theme.
Product Template Javascript	No	The product template javascript recorded for this theme.
Page Template Html	No	The page template HTML recorded for this theme.
Page Template Javascript	No	The page template javascript recorded for this theme.
Collection Template Html	No	The collection template HTML recorded for this theme.
Collection Template Javascript	No	The collection template javascript recorded for this theme.
Blog Index Template Html	No	The blog index template HTML recorded for this theme.
Blog Index Template Javascript	No	The blog index template javascript recorded for this theme.
Blog Post Template Html	No	The blog post template HTML recorded for this theme.
Blog Post Template Javascript	No	The blog post template javascript recorded for this theme.
Contact Template Html	No	The contact template HTML recorded for this theme.

Field	Required	What it controls
Contact Template Javascript	No	The contact template javascript recorded for this theme.

What happens next

Open the screen that uses this choice and confirm the Theme appears with the intended label and availability. Keep the old value for historical records when changing it would split or relabel prior reporting.

Common mistakes and troubleshooting

- **The record will not save:** Recheck **Store**, and **Name** and any message beside the field. A required related record may also be inactive or unavailable to your role.
- **The record saved but is not available where expected:** Recheck **Is Active**, **Preset**, **Theme Pack**, **Hero Layout**, **Product Card Style**, and **Script Type**, then clear the filters on the destination list. A saved record can still be inactive, unpublished, locked, unapproved, or in the wrong workflow state.
- **The values look right but the result is wrong:** Open **Store** from the detail page. Correct the specific relationship that is wrong instead of forcing a total or status to compensate for it.
