Law Enforcement

Law Enforcement overview

The screenshot displays a web interface for the Law Enforcement workspace. At the top, there is a navigation bar with a hamburger menu, the date 'Mon, Aug 10, 2026', a search bar labeled 'Search Here', and a user profile icon. Below the navigation bar, a breadcrumb trail reads 'My site > Law Enforcement'. The main content area features a 'Create New Log' button and a 'Log List' section. The 'Log List' section includes three dropdown filters: 'Select Officer' (set to 'All'), 'Select Source of Complaint' (set to 'All'), and 'Select Tally' (set to 'All'). Below these filters are two date pickers labeled 'Start Date' and 'End Date', both set to 'Click to select'. To the right of the date pickers are two buttons: 'Apply Filters' and 'Clear All Filters'. At the bottom of the log list, a message states: 'There are no Logs in the system matching the current filters.'

Law Enforcement keeps operational and administrative records for cases, people and agencies, evidence, dispatch, activity logs, time, transportation, certifications, and sheriff collections. Use controlled types, statuses, and categories consistently so staff can retrieve the record later and statutory or management reports compare like activity.

Cases and evidence

Use [Cases](#) as the central incident or investigation record, supported by case type, status, jurisdiction, additional information definitions, and case tallies. Catalog each physical or digital item as an [Evidence Item](#). Append an [Evidence Chain Entry](#) for every transfer, receipt, storage, test, release, or disposition; never rewrite earlier custody history to describe a later event.

Daily operations and personnel

[Dispatch Entries](#) record calls, units, location, disposition, and narrative. [Logs](#) preserve chronological agency activity. Maintain [Officers](#), agencies, vehicles, certifications, time categories, and time

incidents as shared operational context. Transportation routes, checkpoints, entries, mileage, and audits preserve the planned and actual movement trail.

Sheriff receipts and deposits

Use [Sheriff Receipts](#) to record payer/source, amount, tender, and deposit state. Group collected receipts into [Sheriff Bank Deposits](#) so the receipt register can be reconciled to the bank. Void, refund, or correct records through the authorized workflow rather than deleting financial history.

Record integrity

Confirm case number, agency, jurisdiction, officer, event time, location, status, and record identity before saving. Separate observed facts from interpretation in narratives. Restrict sensitive case and evidence information to authorized users, and use ReadyLog staging records to review source rows and errors before accepting imported activity into Brisk.
