Municipal

Municipal overview

The Municipal workspace related to this reference article.

Municipal connects businesses and people to licenses, applications, compliance work, tax filings, charges, payments, cemetery records, and statutory reporting. These records can have legal dates and public-service consequences, so preserve the difference between an application, an issued license, a filing, an assessed charge, and a received payment.

Business licensing and compliance

Maintain the legal and operating identity on [Municipal Businesses](#) and the financial relationship on [Municipal Accounts](#). Define policy with [License Types](#), receive requests as [License Applications](#), and create [Licenses](#) only after the required review. Use [Compliance Tasks](#) for inspections, documents, renewals, and follow-up obligations.

Filings, charges, and payments

Payroll tax, net profit, and local tax filings record what was reported for a period. [Municipal Charges](#) record assessed fees, penalties, taxes, or other amounts. [Business License Payments](#) record money received. Reconcile the filing or charge to its payment status instead of changing the assessed amount to make a balance disappear.

Queues, reports, and cemetery records

Use [Municipal License Operations](#) for pending applications, expiring licenses, overdue charges, open compliance tasks, and municipal reporting. Cemetery setup connects [Cemeteries](#), plots, ownership/availability, and [Interments](#). Verify legal names, effective and expiration dates, filing periods, status, parcel or plot identity, and supporting documents before finalizing permanent records.
